

## Available Training Programmes under HKTIC

### 5 HPLC

*This course is suitable for Professional and Supervisory staff*

This one-day training course will provide basic training on HPLC use and method development for laboratory staff who wish to learn more about the technique. On completion of this course, participants shall have adequate knowledge on taking care of HPLC systems, method development and problem solving. The course covers the design and type of HPLC equipment, stationary phases and their properties, choice of stationary phases, mobile phases and their properties, method development & trouble shooting, maintenance & equipment qualification requirements. Examples of some applications are also provided.

This course is designed and delivered by experienced laboratory management professionals who have been actively involved with the use of HPLC, development of specific HPLC procedures, maintenance, trouble shooting and training on HPLC.
