8 Laboratory Safety

The course is suitable for all staff of chemical testing laboratories

This one-day course focuses on different aspects of safety requirements in chemical laboratories. It provides participants fundamental knowledge of legal requirements and practical aspects for observing and practicing safe working conditions in laboratories. Emphasis is given to the daily practical issues and design for improving safe working conditions. The course covers Introduction and Review of Safety related cases, Dangerous Goods Ordinance and Regulations, Contemporary Safety issues, Safety Problems in Chemical Laboratories, Standards and Programmes for Personal Protective Equipment, Standards for Chemical Fume Hoods and Other Safety Equipment, Safe Laboratory Design and Safe System of Work.

The course is designed and delivered by professional safety officer who has more than ten years of experience in laboratory safety.
